Affiliated to Savitribai Phule Pune University

A Field Project Report On

[Field Project Title]

SUBMITTED BY

[Group Members name]

Under the Guidance of

[Guide Name]

TYBSc(CA)

This Field Project Report is hereby presented to the esteemed Department of Computer application, signifying the satisfactory completion of the requirements for the Sem V of Bachelor of Computer Application during academic year 2026-2027.

Id. No. : PU / PN / ASC /
088 / 1992

M.C.E. Society's
ABEDA INAMDAR SENIOR COLLEGE
of Arts, Science & Commerce (Autonomous), Pune
Affiliated to Savitribai Phule Pune University | (Accredited with 'A' grade by NAAC)

Prof. Dr. Shaila Bootwala (M.Com., M. Phil., Ph.D.)
Principal

Mrs. Abeda P. Inamdar
President, M.C.E. Society, Pune

Ref. AISC /

Date :

Department of B.Sc (Computer Application)

Certificate

This is to certify that **Mr./Ms.** _____, a
student of **BSC(CA)** of this college, has **successfully completed** his/her **Field**
Project (FP) titled _____ as
prescribed in the curriculum of **Sem** _____, during the academic year **20** _____ – **20** _____.

During this program, the student's performance, conduct, and dedication were found to
be **satisfactory**.

Project Guide

Head, Department of B.C.A (Science)

Internal Examiner

External Examiner

[this print have to take on company's letterhead with the authorized signature]

This is to certify that,

Mr./Ms. [Student Full Name], a student of **[Class, Department, College Name],** has successfully completed a **Field Project** at **[Organization/Company/Institute Name].**

The student actively participated in the **study, observation, and analysis of the system/work processes** and gained practical knowledge in the field of **[Domain/Area, e.g., Business Processes, IT Systems, Field Survey, etc.].**

The project work carried out by the student has been found satisfactory and in line with the objectives of the field project.

ACKNOWLEDGEMENT

We would like to express our sincere gratitude to everyone who supported and guided us in completing our Final Project titled “[**Project Title**]”.

First and foremost, we would like to thank our Project Guide, [**Guide’s Name**], for providing valuable guidance, suggestions, and continuous support throughout the development of this project.

We are grateful to the Head of the Department, [**HOD’s Name**], and the Principal, [**Principal’s Name**], for providing us with the necessary facilities and encouragement to complete this project successfully.

We would also like to thank all the faculty members of the Department of BCA Science for their valuable support and suggestions during the project.

Finally, we express our heartfelt thanks to our parents, friends, and classmates for their encouragement and support throughout the completion of this project.

Thank You.

Project Team

[**Student Name 1**]

[**Student Name 2**]

[**Student Name 3**]

[**Student Name 4**]

INTRODUCTION

Online Examination Management **System** is software that manages all the information related with online exam. There are two actors in this project one is Administrator and the other one is User. Basically the exam pattern is based on the multiple choice questions. Administrator has privilege to manage all the activities done by the user, he can create modify and delete the test papers and its particular questions. Administrator can change the categories (Streams) and sub categories (Subjects) of the exams that means he can add, modify or delete the categories. Administrator can view all the details of the users with their examination details.

The second actor user can use this website to test his skills in various technologies or categories. First the user has to register him, after registration his account will be created and he can login with his login id and password. After login to the account he will be provided with various categories and sub categories for the test. He can select any category and subcategory for the test such as if he is from computer science field and he want to test his skills for Java technology then he has to select the category as computer science and the sub category as Java, after selecting the category he can start the test. The test is consisting of multiple choice questions. At the end of the exam the result will generated on the basis of questions solved.

PROBLEM DEFINITION

The Software is design for students to examine their skills. Since the college or school systems are manually handled, it is very difficult to handle a large amount of data. The students can only give the exam when the exam date is provided they can't test their skills and knowledge when they want. Student has to wait for their results.

So to overcome this entire problem this automated version of system is introduced which is not dependent on the teachers, college and university to attempt test. There was a need to maintain the registers or to manually check papers or generate result. It require more time to maintain details, set question paper, check that papers and generate results.

EXISTING SYSTEM

Existing System of the Examination Management System is not online and the system is designed only according to college or university system and not according to the user. There is no facility for online registration of user there is no facility to give online exam and see the result at the same time student has to wait for their result. Student has to write the papers manually. There is no system on which the student can practice and test their skill. Teachers has to set papers, maintain details, check papers and generate result

The existing system is focusing only on the requirement of the colleges and university while our system is focusing on the student's requirement so that they can practice more and can become more perfect

PROPOSED SYSTEM

An Online Examination Management System is developed for the students to test their skills. It is developed so that the students can practice whatever they have studied and can give the test when they want. The proposed system provide the online registration of user. The system maintain all the details of users it also generate the result at the same time on the basis of question attempt. There is no waste of time in maintain the details, questions and checking the papers and generating the result.

The students can update their details when they want. Admin can manage all the details related to exam. System generate all the reports every day so there will be no lost of data. System brings improvement in the quality service. Providing timely and accurate information, also to maintain the each record correctly.

NEED OF THE PROPOSED SYSTEM

The computerized online examination system will help the students to check their skill easily by giving the online test instead of writing the paper also the work load of the teachers will be reduced for checking the papers and generating the result this all work will be done automatically by the online system. Students can get many new things from the system; instead of getting bore they can enjoy the exam as well.

SCOPE OF THE PROPOSED SYSTEM

The online examination system can be used in any college or any institute. Companies can use this software to conduct the interviews by doing some modifications. Students can give test or test their skills whenever they want. Students can see result at the same time after attempting all the questions. The system can be used as World Wide Web. Companies can use this system to test the skill or knowledge of their employee about particular subject. Even schools can use this system to conduct the test. The system can be used to conduct entrance exam like MHT-CET, NET & SET etc.

FACT FINDING TECHNIQUES

1. Interview

The end user was interviewed at their side work. It gave the idea of the atmosphere and condition under they work, problem failure etc.

2. Observation

Observation allows analyst to gain information they can't get from any other fact-finding method. Though observation, analyst can obtain information about the activities carried out. Their analyst have to themselves observed the activities carried out by the system and whether specified step all actually followed .This can also be called on spot observations. While finding the facts we keenly observed the usage of communication documents and other record keeping methods. Observation helped us in finding out the actual way of functioning apart from the ideal or desired.

3. Questionnaires

Session of questionnaires was conducted and came to know that what actually the need is. Thus resulting sometime in relevant data and redundancy, and certainly nobody has time to complete the Questionnaires.

4. Record Searching

To implement any changes there is always a resistance. This was gathered by restoring the records searching techniques. This method also helps a lot to establish the quantitative information.

FEASIBILITY STUDY

1. Technical Feasibility

Technical feasibility was conducted to check whether the required hardware, software, and technology are available for developing the proposed system. It helped us determine whether the system can be implemented with the available technical resources.

2. Economic Feasibility

Economic feasibility was carried out to compare the development cost with the expected benefits. It helped us determine whether the proposed system is cost-effective and reduces manual work and expenses.

3. Operational Feasibility

Operational feasibility was conducted to check whether the proposed system is suitable for the users and existing work process. It helps improve efficiency, accuracy, and ease of use.

4. Schedule Feasibility

Schedule feasibility was used to determine whether the system can be completed within the given time. The development activities and required time were considered to prepare a suitable schedule.

HARDWARE AND SOFTWARE REQUIREMENTS

Hardware Requirement:

Pentium III or above, 64MB Ram or more

Software Requirement:

Language : JAVA

Database : MySql

Operating System : Windows

Server : Apache Tomcat

ER Diagram

DATA DICTIONARY

STUDENT TABLE:

Sr. No	Coloum Name	Data Types	Keys
1	Student_Id	Integer	Primary key
2	Student_Name	Varchar(50)	Not Null
3	Student_Password	Varchar(50)	Not Null
4	Student_Address	Varchar(50)	Not Null
5	Mobile_No	Integer	Not Null
6	Email_Id	Varchar(20)	Not Null

STREAM TABLE:

Sr. No	Coloum Name	Data Types	Keys
1	Stream_Code	Varchar(5)	Primary key
2	Steam_Title	Varchar(20)	Not Null

SUBJECT TABLE:

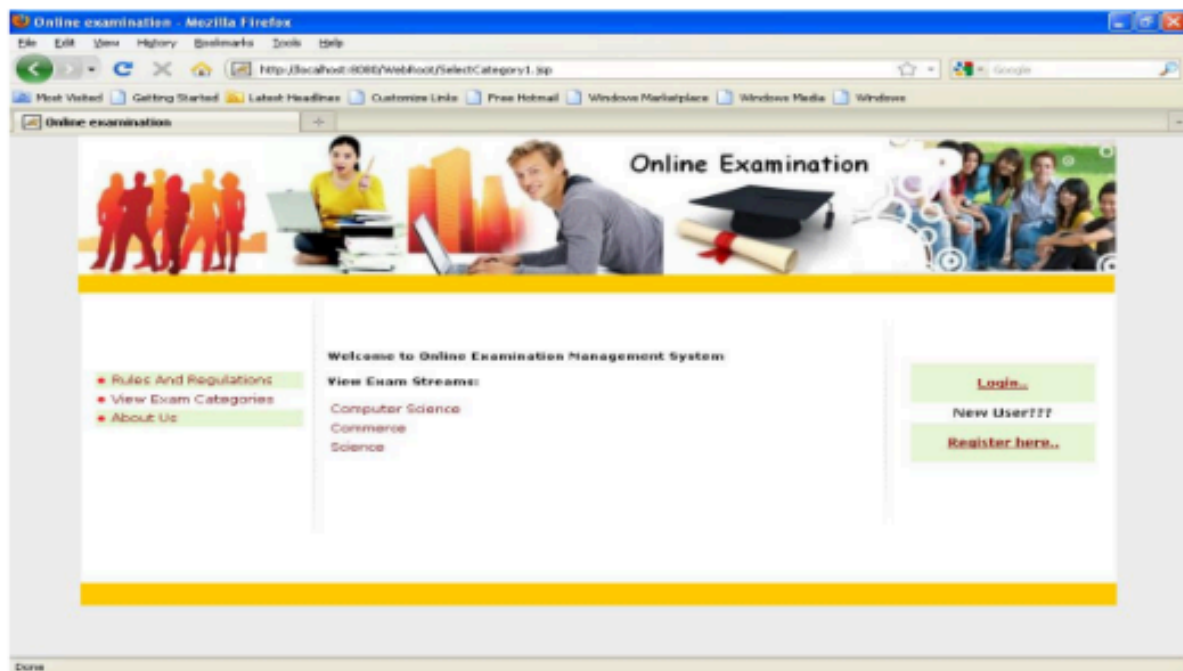

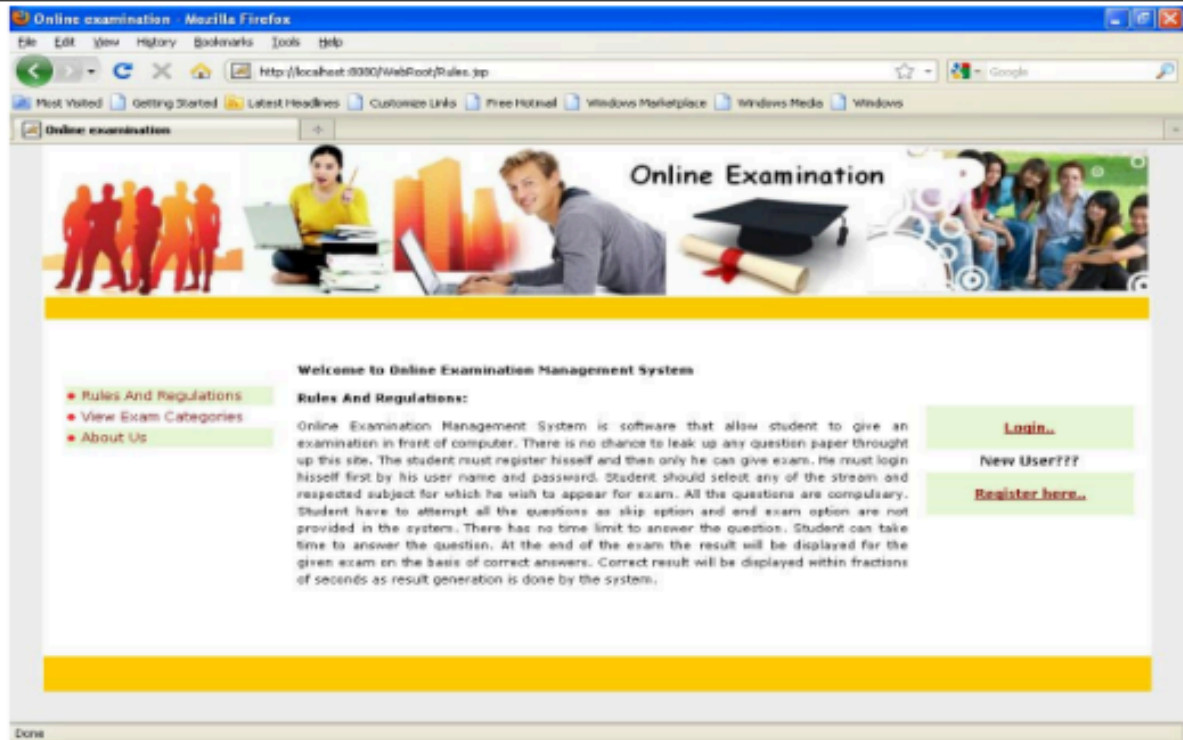

Sr. No	Coloum Name	Data Types	Keys
1	Subject_Code	Varchar(5)	Foreign Key
2	Subject_Title	Varchar(20)	Not Null
3	Stream_Code	Varchar(20)	Reference Key

QUESTION TABLE:

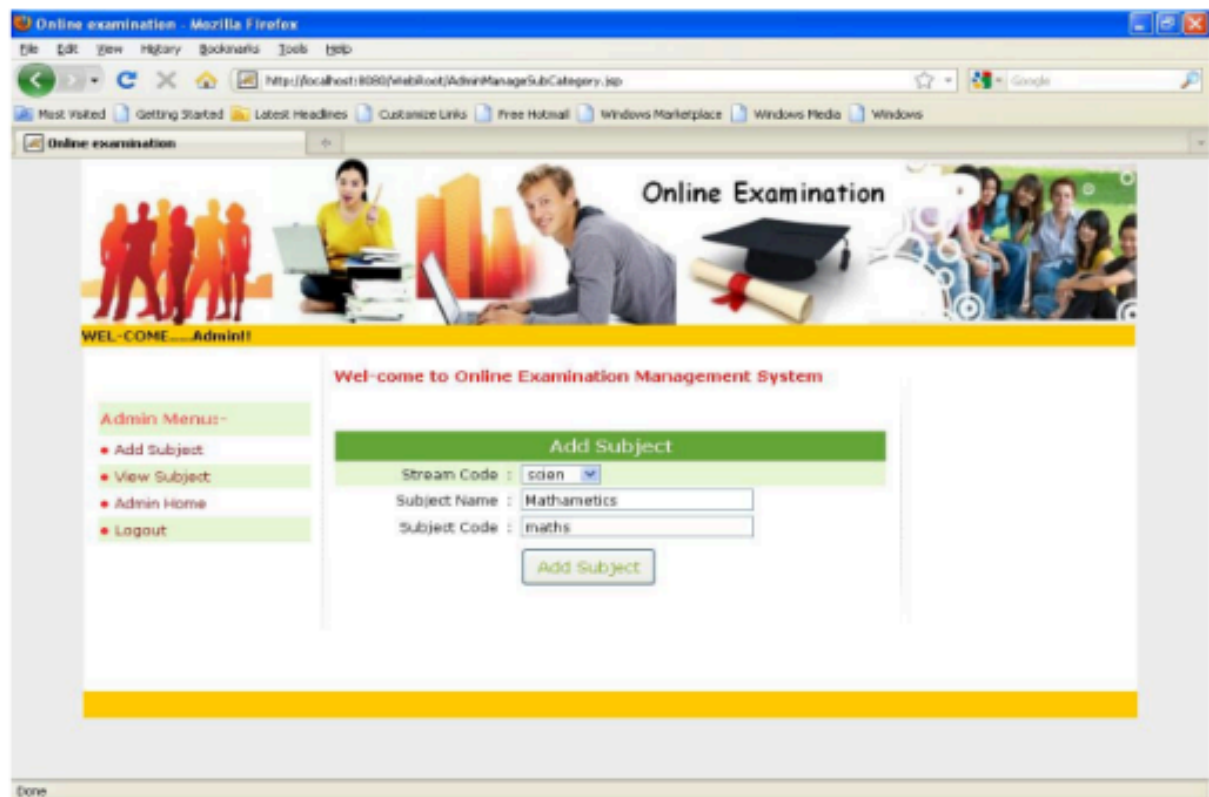

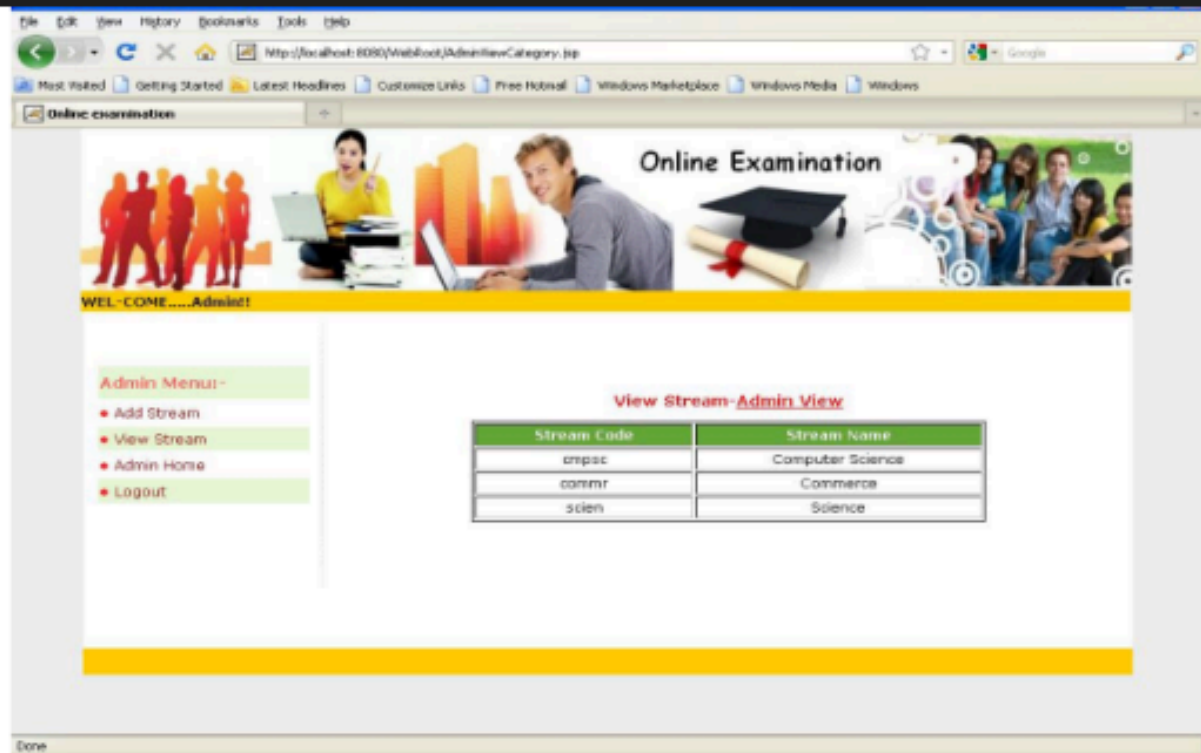

Sr. No	Coloum Name	Data Types	Keys
1	Question_id	Integer	Primary Key
2	Question	Varchar(100)	Not Null
3	Answer1	Varchar(100)	Not Null
4	Answer2	Varchar(100)	Not Null
5	Answer3	Varchar(100)	Not Null
6	Answer4	Varchar(100)	Not Null
7	Correct Answer	Varchar(100)	Not Null
8	Stream_Code	Varchar(5)	Foreign Key
9	Subject_Code	Varchar(5)	Foreign Key

LIMITATIONS

Although the proposed system fulfills its main objectives, it has certain limitations:

1. The system is designed to meet the specific requirements of the project and may require modifications for additional features or different use cases.
2. The system depends on the availability of the required hardware, software, and internet connection.
3. The current version supports a limited set of functionalities and can be enhanced with additional features in the future.
4. The system has been tested under a limited range of conditions and may require further testing with a larger number of users and data.
5. Some advanced features, such as enhanced security, scalability, and integration with external systems, are not included in the current version.

CONCLUSION

From the proper analysis of positive points and constrain on the component, it can be safely concluded that the product are highly efficient . This application is working properly and meeting to all user requirements. This component can be plugged in many other systems. The Online Examination system which is developed by the team has an edge over the present system, which is manual. The major success of developed system is in the hands of the user who is ultimately going to use the system. The valid input that is required can yield the best result . Unauthorized user will not be able to use the system and ca not give exam until they register themselves, once the student or user is registered then user is fully authorized to view his modules.

This Web Application provides facility to conduct online examination world wide. It saves time as it allows number of students to give the exam at a time and displays the results as the test gets over, so no need to wait for the result It is automatically generated by the server. Administrator has a privilege to create, modify and delete the test papers and its particular questions. User can register, login and give the test with his specific id, and can see the results as well.

Hence we can say that the system developed will give the optimum results to its users. This system which is developed reduced a lot of manual work and give the required result. It is user friendly too.
